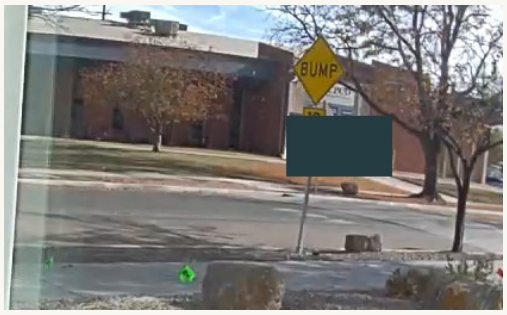
COLORADO SPRINGS / OCTOBER 31, 2025

From the window to the street

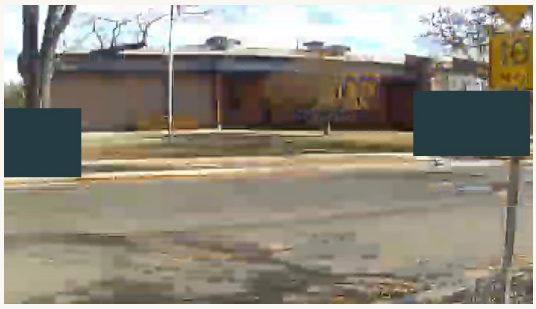
Three frames follow one Axon body camera over 45 seconds. The same brick building and traffic sign help orient the first two views.



10:42:30 / 00:08 elapsed

View through a window

Across the road, a yellow bump sign stands in front of a brick building. The window edge is visible at the left.



10:42:54 / 00:32 elapsed

Street-level view

The camera is outside. Across the street are the same building, flagpole and yellow sign seen through the glass.

10:43:15 / 00:53 elapsed

At the brick ledge

The camera has reached a seated adult. A hand is visible against the blue fabric at the adult’s shoulder.

What these frames can establish

They locate the camera and show the later contact at the ledge. The doorway encounter is outside these frames. They cannot establish what prompted the later contact or what anyone said.

Camera and edits

Axon Body 4, D01A8378S. Times are the original on-screen clock (UTC−06:00) and elapsed time in the source file. The frames are cropped. Opaque patches obscure a distant entrance and vehicles. Faces, audio and the view inside the room are omitted.
